# Pako's story

*Pako is a panda that classifies himself as an astronaut that likes to explore the galaxy. His friend Shiba went on a mission in his spaceship, but got lost somewhere in the galaxy, so Pako decided to go after Shiba to find him and rescue him.*

*Unfortunately, he can't do this without you! Pako's habitat is becoming too small, which results in a lack of resources. By buying his tokens he is able to buy more fuel for his ship and travel throughout space in order to find his friend. To reward your support, he will make his tokens more valuable over-time if he has the right resources. This will benefit all hodlers! At each planet that Pako is able to visit, he can gather more resources which will result in a higher value per token. He might even give you a ride to the moon so what are you waiting for? Help Pako out now!*

# Our purpose

Pako has several plans. Not does he only want you to gain in the process of investing in his journey, but also his family who needs it the most.

Our use case in real life relates to Pako's family. While helping him with rescuing his friend, the participants of the movement will each be rewarded with compounding returns of hodling PAKO tokens. This will all help the project to not only help out Pako with his mission, but also to have a donation campaign along with the WWF to help out his family, the pandas who are still endangered till this day.

# A joyride to the moon

Pako is not only here to serve his friend Shiba and pandas, but also you. It's his goal to give you and many others a joyride to the moon and many other planets. Join our community and let's keep expanding like the universe. Seriously, there are no boundaries.

# Pakonomics

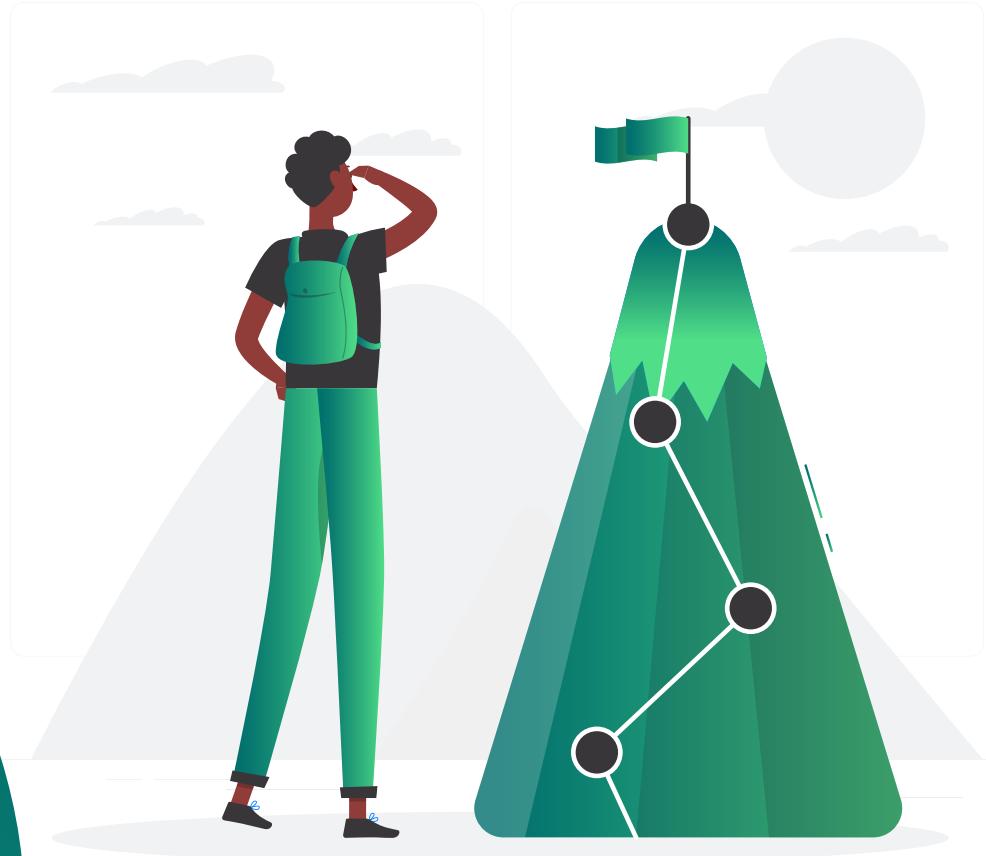

There is a total supply of 100 billion PAKO tokens of which 2.8% has been appointed to the dev-wallet for marketing and coverage of other future costs. This is done to benefit the project and bring more overall value to the table.

60% of the supply has been used for the pre-sale of which 75% is locked for seven months, which will be extended when expired. The remaining 33.2% will be provided to the liquidity pool and 4% has been used to pay fees.

Every transaction will incur a 10% tax, split into:

- 4% automatic holders farming
- 4% to provide liquidity
- 2% sent to the marketing wallet

This forms as the basis of our economic model, based on the best of interest for our community. This split has not only been coded within the smart contract but also engrained within our community.

# Pakonomics

## Auto-Farming

There is an automatic yield system that ensures 4% of every transaction is shared between all current holders of PAKO. This system replaces the traditional farming, rewarding holders by compounding their holdings without risk, without staking and without coins ever leaving their wallet.

## Liquidity

4% of every transaction is being provided for liquidity – it is important to have high/enough liquidity to avoid high volatility, which may cause spikes in PAKO's price. By providing high liquidity PAKO will be a stable market, with few fluctuations in price.

## Marketing wallet

This is important for the PAKO token, and the reason for its existence – this 2% is going to contribute as a valuable resource which can be used to push the agenda and spread the existence of PAKO by community-based decisions while being transparent and taking this project to an even higher level.

# Charity

Oh no... Pako's species is threatened with extinction. We have to help them out!

As known worldwide, pandas are still in danger of extinction even though it's getting better with the day. Pako wants to contribute to the restoration and safeguarding of their habitat. We will support charity by donating every month out of the dev wallet.
